

Unlucky Sika Deer

Un...unlucky?

Point

Point
3

They jump out even when they see the car

Sika deer watch from the roadside. Just as you may think it's okay because they seem to be watching you coming, **they jump out towards you.** "Why do they jump out just as a car is close by? Someone please explain this!"

Point
4

They come out when the light is low

Sika deer become active around **dawn and dusk when the light is low.** They go out to feed under the cover of darkness. "It's especially hard for humans to see when the light is low, so hopefully they don't jump out!"

How many can you get right?

What happens when you collide with a sika deer?

Accidents involving sika deer are increasing across the Ishikari and Sorachi regions. Sika deer are large animals that can spring out of nowhere and cause considerable damage if they collide with a car.

If you see animal warning signs, be careful not to drive too fast!

Keep in mind!

Sika deer are also found in residential areas!

Sika deer, often referred to as "urban deer," are increasingly appearing in urban areas. These naturally timid animals do not pose a threat to humans, but they can become aggressive if provoked. If you see sika deer in urban environments, it's important to avoid threatening or startling them.

If you find a fallen sika deer or an issue with the road, contact the **24-hour Road Emergency Dial!**

Sika Deer Safety Tips

Be careful

Make sure you know how sika deer act!

Point 1

They slip and cannot walk well on the road

Sika deer are fast runners and can reach speeds of up to 70 km/h. But roads are another matter. Roads may be easy for cars to drive on, but **deer's hooves slip and they often fall over**. Some drivers say they were startled when they saw a deer suddenly struggling on the road.

Point 2

They only watch the leader

Sika deer are herd animals. Even if the leader carefully checks whether a car is coming before crossing, **the other deer will follow blindly without checking their surroundings**. They will not even notice if a car is approaching. "If only they checked before crossing!"

Drive as if sika deer are everywhere!!

The most important thing to do to avoid a collision is **slow down!**

About sika deer

Only male deer have antlers. They shed their antlers and grow new ones every spring.

Their eyes glow in the reflection of headlights at night.

What's a car?

Their fur changes color in the summer and winter (this is the winter coat).

They let out a high-pitched warning call.

Their hooves slip on the road.

- Eat a lot
- Surprisingly bold
- Move in herds
